

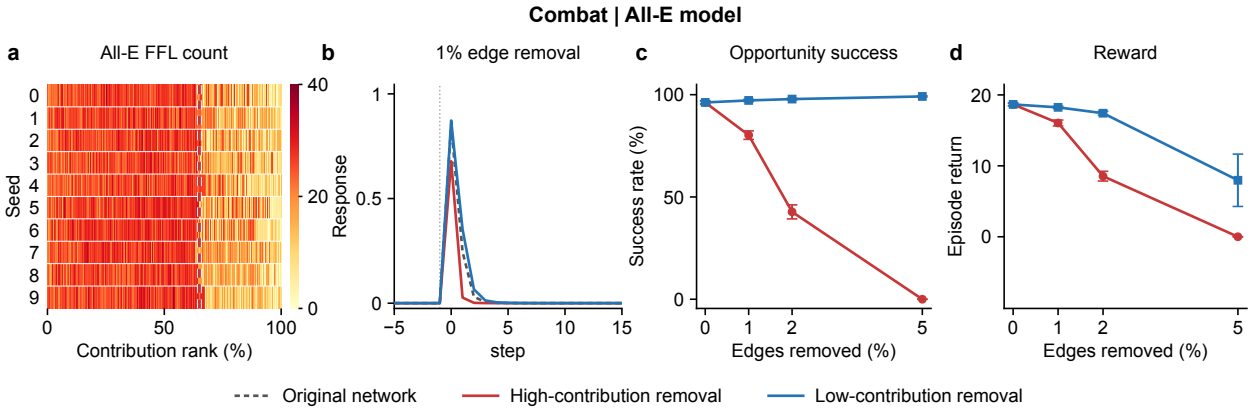

Figure R4 | FFL-associated edge ablation in Combat.

a, All-E FFL counts per edge, ordered by single-edge ablation loss; rows denote seeds. The red dashed line marks the visual colour transition. b, Combat response after 1% edge removal. c,d, Opportunity success rate and episode return. Red/blue: removal from the highest/lowest-contribution 20% of FFL-associated edges; doses are percentages of all threshold-graph edges. Lines show means across 10 training seeds after averaging sampled sets within each seed; shading, ±1 SEM; error bars, ±1 SD.
